

Do you, or someone you know, have MS?  
Want to help?  
Two studies at Bastyr are now recruiting:

**Study #1: CAM Care in MS  
(In search of the positive deviants...)**

Who: Individuals with MS anywhere in the world.  
What: Fill out a survey every six months for five years.  
Why: To identify the individuals doing especially well, and to describe the qualities that set them apart from everyone else. The more people who participate, the more we learn! PLEASE FORWARD this email.

**Study #2: A Cross-Sectional Study of Coagulation in MS  
(Diet, clotting, and MS)**

Who: Individuals with MS and controls.  
What: A single visit involving a blood test and a neurological evaluation in Kenmore, WA.  
Why: To determine whether individuals with MS have different clotting “signatures” than healthy controls, and evaluate whether the differences are affected by diet.
